

ABSTRACT

2 An imaging media cartridge for use in an imaging apparatus includes a first
3 imaging media reservoir chamber and a second imaging media reservoir chamber. A
4 removable barrier is disposed between the first imaging media reservoir chamber and
5 the second imaging media reservoir chamber. By removing the removable barrier, a
6 reserve of imaging media can be provided from the second imaging media reservoir
7 chamber to the first imaging media reservoir chamber. In one embodiment the imaging
8 media cartridge is a toner cartridge. In another embodiment the imaging media cartridge
9 is a liquid ink cartridge.
